

# Indicator: Active Bald Eagle Nests

**Description:** Number of active bald eagle nests.

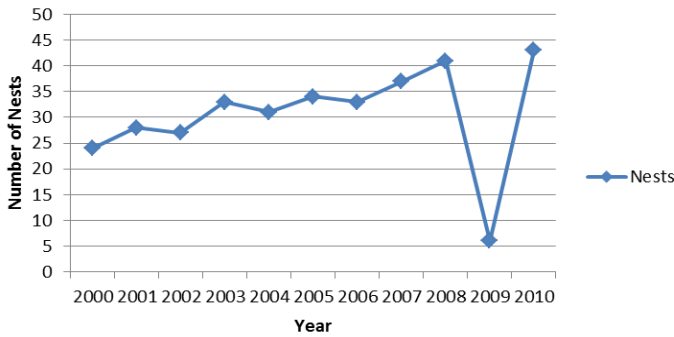

**Sources:** Florida Fish and Wildlife Conservation Commission -<https://public.myfwc.com/FWRI/EagleNests/nestlocator.aspx>

**Caveats:** The number of active bald eagle nests can be indicative of the quality of both their habitat and that of their food source, fish. Known nests are revisited each year and new nests are discovered. Data in the year 2009 is inconclusive, as there were only 6 reported active sites that were tracked and many that were not actively surveyed. The number of bald eagle nests is determined by aerial counts each year.
